Aegis Padlock Fortress

Quick Start Guide

When you first plug in the Aegis Padlock Fortress, the unit will do a self-test to verify all security components are working properly. The LEDs will go through 3 test stages RED, GREEN, and BLUE. This will be followed by three GREEN flashes on a successful test. Any test failure will leave the unit in an interoperable state with the RED LED flashing.

First Time Use

Before the Padlock can be used, the Admin PIN MUST be set. The LED will display Solid **BLUE** and Solid **GREEN** to indicate the Padlock is waiting for a PIN to be set.

To Set-up the Admin PIN:

- Press UNLOCK + 9. The LED will change to Solid BLUE and Blinking GREEN.
- Enter the new Admin PIN and press UNLOCK key. If accepted the GREEN LED will flash for 3 short blinks, then return to Solid BLUE and Blinking GREEN.
- 3. Re-enter the Admin PIN and press the **UNLOCK** key. If accepted the **GREEN** LED will be Solid for 3 seconds.
- LED will then turn BLUE and remain in Admin mode for 30 seconds or if the LOCK key is pressed, will return the drive to a standby state.
- 5. The Admin PIN is now set and will allow access to the drive or the Admin features.
- To UNLOCK the drive, exit Admin by pressing the LOCK button. Then enter the new PIN and press UNLOCK.

*Note: PINs must be a minimum length of 7 maximum 16 digits.

Cannot contain all consecutive numbers (2345678 or 9876543)

Cannot contain all same number (1111111)

The **SHIFT** key can be used for additional combinations. **SHIFT** + 1 are a separate value than just 1.

Locking the Drive

To lock the drive, press the **LOCK** button.

If data is still being written to the drive, the Padlock will wait until all data has been written to the drive and then it will lock automatically.

Note: The Aegis Padlock will not be recognized by the operating system in the standby state.

Unlocking the Drive

To unlock the drive, enter either a User PIN or Admin PIN and press the **UNLOCK** button.

Adding a new User PIN

- 1. Enter the Admin Mode (UNLOCK + 0 for five seconds. Enter Admin PIN and press UNLOCK).
- 2. Press and hold UNLOCK + 1 until the LED turns to Solid BLUE and Blinking GREEN.
- Enter a User PIN and press UNLOCK (a minimum of 7 digits and a maximum of 16 digits).
 The LED flashes GREEN three times, then returns to Solid BLUE and Blinking GREEN.
- Re-enter the new User PIN and press UNLOCK. If the LED stays solid GREEN for two seconds and then solid BLUE, the User PIN was successfully added.

Formatting For Mac OS

The Aegis Secure Key comes preformatted in NTFS for Windows® and is ready for use. For the Mac OS, you must first reformat the drive to a Mac compatible file system.

Once drive is unlocked and inserted into a USB port, open the

Mac Disk Utility from Applications/Utilities/Disk Utilities and perform the following:

- 1. Select the Aegis Padlock Fortress from the list of drives and volumes.
- 2. Click the 'Erase' tab.
- 3. Enter a name for the drive. The default name is Untitled. The drive's name will eventually appear on the desktop.
- 4. Select a volume format to use. The Volume Format dropdown menu lists the available drive formats that the Mac supports. The recommended format type is 'Mac OS Extended (Journaled).'
- 5. Click the 'Erase' button. Disk Utility will unmount the volume from the desktop, erase it, and then remount it on the desktop.

Complete formatting instructions can be found online at https://www.apricorn.com/media/document/file/AegisPadlockFortress_Manual.pdf
