

Aegis Secure Key 3NXC™

AES 256 Bit XTS Hardware-Encrypted
FIPS 140-2 Level 3 Validated
USB 3.2 type-C Flash Key

The NeXt Step for Aegis Secure Keys.

Tiny footprint, giant security. The Aegis Secure Key 3NXC is the first 256-bit AES XTS hardware-encrypted flash key employing USB-C connectivity, all while including all of the functions and features you've come to expect from Apricorn. Bootable, OS agnostic, and completely cross-platform compatible, the Aegis Secure Key 3NXC comes in 7 capacities from 4GB to 256GB.

The Practical Choice.

From small businesses to large corporations, the Aegis Secure Key 3NXC delivers the most data security for your buck. With capacities starting as low as 4GB and as high as 256GB, the size and cost of the device can be closely aligned to match the amount of data that an associate normally needs to carry. Its low cost and Aegis Configurator™ compatibility make it the smart choice for company deployments both large and small.

Portable Versatility.

Roughly the size of a five stick pack of gum, the Aegis Secure Key 3NXC easily fits in any pocket, purse, or computer carry case. Its type-C connector is universally compatible to all type C ports, and can further be adapted to work with Type-A ports with our C to A adapter (sold separately.) And since it's OS agnostic, the 3NXC can work with any device with a C port, from a tablet, to a phone, a Windows machine, and a Mac with ease.

Tough on the Outside.

IP 67 rated against water immersion and blowing dust. Rugged terrain, sand, wet locations and extreme temperatures are no match for the 3NXC. The crush-resistant aluminum alloy outer enclosure and durable sleeve are ready for anywhere. And the abrasion resistant keypad with polymer coating prevents keypad wear to conceal those commonly pressed keys. Inside, a hardened epoxy potting serves to prevent internal tampering.

No Software. Period.

Apricorn's unique hardware based approach delivers the highest levels of data security and workflow compatibility. Like all Aegis secure drives, the Secure Key 3NXC is software-free, hardware-encrypted, and completely cross-compatible. And since it's software-free, 100% of its authentication and encryption processes take place within the device itself, never involving the host computer in any of its security processes.

Aegis Secure Key 3NXC™

Super portable secure flash key with AES 256-Bit XTS Hardware encryption and USB 3.2 Type-C Connector And Rugged Aluminum Alloy enclosure and durable protective sleeve.

Software-Free / Locked-Down Firmware to Prevent Introduction of Malware Such as BadUSB

Our patented firmware delivering the industry's most advanced feature set- the heart and soul of every Apricorn device.

Separate Admin and User Modes / PINs

Admin (Device Configuration) Mode and User Access Mode. The Admin mode controls the universal programmable settings of the device and can only be accessed with the Admin PIN. The User mode is for general external drive usage like read /write, unlock / lock, and certain other functions. The User mode is accessible via a User PIN or the Admin PIN. Up to four User PINs may be enrolled.

Admin Forced Enrollment

Eliminates factory default PIN vulnerability by forcing the enrollment of an Admin PIN prior to use. As with all Apricorn Aegis secure devices, there are no default passwords, and no back-doors. In order to use any Apricorn secure drive, the Admin must first establish a complex PIN.

User Forced Enrollment

Beyond the admin PIN, one additional PIN can be generated to access the device's data. This User PIN can be set up by the admin at initial setup, or the device can be deployed in a state of User Forced Enrollment, allowing the user to establish his or her own PIN prior to use.

Data Recovery PINs

Programmed by the admin at time of setup to permit regaining access to the drive by creating a state of User Forced Enrollment in which a new User PIN can be created without affecting the drive's existing data or the Admin PIN.

Two Read-Only Modes

Universal Read Only: set by the admin from within the admin mode and can't be modified or disabled by anyone but the admin. The second (User) mode can be set and disabled by a user but can also be enabled or disabled by the admin.

Programmable PIN Length

Admin designates minimum and maximum PIN lengths (between 7 and 16 Characters). The longer the PIN, the more secure the data on the device becomes. For example, the odds of brute force success go from 1/10,000,000 with a 7-digit PIN to 1/100,000,000 with an 8 digit PIN. In cases where the User sets up his or her own PIN from User Forced Enrollment, the Admin can still affect User password length requirements

Unattended Auto Lock

Programmable length of time of inactivity permitted before drive locks itself. All Aegis Secure Drives will automatically lock once disconnected from a computer's USB port or the power to that USB port is interrupted, or after a pre-programmed period of inactivity.

Lock Override

Allows drive to remain unlocked during USB Port re-enumeration (Virtual Machine, Remote Boot). Designated for specific cases in which the drive needs to remain unlocked through USB port re-enumeration such as during reboot, or passing through a virtual machine.

Self-Destruct PIN

When programmed and activated, performs a crypto-erase and becomes new access PIN. The last line of defense for data security when the device's physical security is at risk. The Self-Destruct PIN defends against these physically compromising situations by erasing the drive's contents, leaving it in normal working order appearing yet to be deployed.

Brute Force Defense

Programmable number of consecutive invalid PIN attempts permitted (4-20) before crypto-erase. If the device comes under a physical brute force attack, once the programmed number (between 4 and 20) of consecutive incorrect password entries has been attempted, the device will delete its own encryption key and destroy the ability to decrypt its stored data.

Provision Lock

Patented setting where the admin can designate whether the device will permit itself to be reset by a User or after a brute force attempt. If Provision Lock is enabled, any attempt at complete reset will "brick" the device for good.

Fixed Disk or Removable Media

Can be Configured as Fixed Disk or Removable Media in device setup. Easily adapts to embedded equipment and OSs that will only recognize one or the other for removable storage. Some applications or embedded systems may allow one type but not the other. U.S. Patent No. 10,338,840

TECHNICAL SPECIFICATIONS

CAPACITIES

Flash: 4GB, 8GB, 16GB, 32GB, 64GB, 128GB, 256GB

TRANSFER RATE

FLASH: up to 171MB/s (r) / 160MB/s (w)*

INTERFACE

USB 5Gbps TYPE-C

DIMENSIONS and WEIGHT

81mm x 18.4mm x 9.5mm | 22g
3.25" x .75" x .375" | .78oz

POWER SUPPLY

USB port / Internal battery (for PIN entry only)

OPERATING TEMPERATURE RANGES

32° to 158°F (0°C to 70°C)

OPERATING HUMIDITY RANGES

95% @ temps under 131°F (55°C)

CRUSH RESISTANT

up to 6500 LBS

SHOCK FLASH

OPERATING / NON-OPERATING: 1500G .5ms

OPERATING VIBRATION

OPERATING: 5.0 gRMS, 10-2000Hz

WARRANTY

3-Year Limited

SYSTEM COMPATIBILITY

WINDOWS, MAC OS, LINUX, ANDROID, CITRIX
any that supports a USB mass storage device

SKU NUMBERS

FLASH: ASK3-NXC-4GB, ASK3-NXC-8GB,
ASK3-NXC-16GB, ASK3-NXC-32GB, ASK3-NXC-64GB,
ASK3-NXC-128GB, ASK3-NXC-256GB

PACKAGE CONTENTS

Aegis NX, Protective Sleeve,
Multi-Language Quick-Start Guide

* To achieve these speeds, your computer's internal hard drive must be an SSD; all transfer rates will be limited by computer's internal drive
One gigabyte (GB) = one billion bytes; accessible capacity will be less and actual capacity depends on the operating environment and formatting.
